## PREFACE

This report presents statistics on the number of inhabitants of the State, its counties, and minor civil divisions (townships, etc.). In addition, separate figures are also presented for urban places, wards of cities of 5,000 or more, and other areas of the State. These data are based upon tabulations from the Seventeenth Decennial Census of the population of the United States, its Territories, and possessions conducted as of April 1, 1950. Provision for the Seventeenth Decennial Census was made in the act providing for the Fifteenth and subsequent decennial censuses which was approved on June 18, 1929.

The major portion of the information compiled from the Census of Population of 1950 will appear in Volume I, *Number of Inhabitants*, and in Volume II, *Characteristics of the Population*. This report is a preprint of Chapter 10 (Florida) of Volume I, which is to present, in a single publication, statistics on the number of inhabitants for each State.

The materials presented here will also appear as Chapter A of Part 10 (Florida) of Volume II. Volume II will comprise a series of separately published parts, one for each State and a summary for the United States. The use of separate parts makes the basic materials on characteristics of the population for a given State available to the public in a single publication. Within the part for a State, Chapter A will recapitulate the statistics on the number and distribution of the population within a State; Chapter B will present statistics on the general characteristics of the population of the various political subdivisions of the State, such as counties, incorporated places, and the like; and Chapter C will present data on the detailed characteristics of the population of the larger areas within the State, such as cities of 100,000 inhabitants or more and standard metropolitan areas.

The materials presented here were prepared under the supervision of Howard G. Brunsman, Chief, Population and Housing Division, and Dr. Henry S. Shryock, Jr., Assistant Chief for Population Statistics, by Dr. Henry D. Sheldon, Chief, Demographic Statistics Section, and Charles P. Brinkman, Chief, Population Distribution Unit; the compilation of the statistics was under the direction of Robert B. Voight, Assistant Chief for Operations. The collection of the information on which these statistics are based was under the supervision of Lowell T. Galt, Chief, Field Division. The geographic work, including the delineation of special types of urban territory and the preparation of maps, was under the supervision of Clarence E. Batschelet, Chief, Geography Division.

# FLORIDA

## Number of Inhabitants

**The State.**—Florida was organized as a Territory in 1822, with boundaries as at present from the area purchased from Spain in 1819 and transferred to the United States in 1821. It was admitted to the Union in 1845 as the twenty-seventh State. Its population on April 1, 1950, according to the Seventeenth Census, was 2,771,305. The State has a land area of 54,262 square miles. In 1950 there was an average of 51.1 inhabitants per square mile as compared with an average of 35.0 in 1940. Among the States, Florida ranked twentieth in population and twenty-fifth in land area.

In 1830, the first year in which the Territory of Florida was enumerated in a Federal census, the population was 34,730 (table 1). In 1950, 120 years later, its population was about 80 times as large. Throughout its history the intercensal rates of increase for Florida have exceeded those for the Nation as a whole. In the nineteenth century the rates ranged from a low of 33.7 percent to a high of 60.6 percent. By 1900 the population of the State was 528,542, or 15 times as large as the population in 1830. In the twentieth century the rates of increase ranged from 28.7 percent for the decade 1910 to 1920 to 51.6 percent for the decade 1920 to 1930. The numerical increase of 873,891 between 1940 and 1950 was the largest in the history of the State, and the rate of increase—46.1 percent—was exceeded only by the rates for the States of California and Arizona.

**Usual place of residence.**—According to usual Census practice, which dates back to 1790, each person enumerated in the 1950 Census was counted as an inhabitant of his usual place of residence or usual place of abode, which is generally construed to mean the place where he lives and sleeps most of the time. This place is not necessarily the same as his legal residence, voting residence, or domicile, although, in the vast majority of cases, these different bases of classification would be identical.

In the application of this rule, persons were not always counted as residents of the places in which they happened to be found by the census enumerators. Persons in places where guests usually pay for quarters (hotels, etc.) were enumerated on the night of April 11, and those whose usual place of residence was elsewhere were allocated to their homes. Visitors found staying in private homes, however, were not ordinarily interviewed there. Information on persons away from their usual place of residence was obtained from other members of their families, landladies, etc. If an entire family was expected to be away during the whole period of the enumeration, information on it was obtained from neighbors. A matching process was used to eliminate duplicate reports for persons who reported for themselves while away and were also reported by their families at home.

Persons in the armed forces quartered on military installations were enumerated as residents of the States, counties, and minor civil divisions in which their installations were located. Members of their families were enumerated where they actually resided. In the 1950 Census, college students living away from home were considered residents of the communities in which they were residing while attending college, rather than as persons temporarily absent from their parental homes as was the practice in 1940. In

1950 the crews of vessels of the American Merchant Marine in harbors of the United States were counted as part of the population of the ports in which their vessels were berthed on April 1, 1950. In 1940 such persons were treated as part of the population of the port from which the vessel operated. Inmates of institutions, who ordinarily live there for long periods of time, were counted as inhabitants of the place in which the institution was located; whereas patients in general hospitals, who ordinarily have short stays, were counted at, or allocated to, their homes. All persons without a usual place of residence were counted where they were enumerated.

**Urban and rural population.**—The 1950 urban population of Florida comprised 1,813,890 persons, or 65.5 percent of the population of the State (table 1). The urban population was living in the 98 urban places in the State and in other territory included in the urban-fringe areas of the Jacksonville, Miami, Orlando, St. Petersburg, and Tampa Urbanized Areas. Almost three-fifths of the urban population of the State was living in urbanized areas (table 2).

The rural population of Florida comprised 957,415 persons, or 34.5 percent of the population of the State (table 1). Of the rural population, 131,238 persons, or 13.7 percent, were living in the 58 incorporated places and the 26 unincorporated places of 1,000 to 2,500 inhabitants (table 2).

**Urban definition.**—Under the urban definition established for use in the 1950 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, towns,<sup>1</sup> and villages; (b) the densely settled urban fringe, including both incorporated and unincorporated areas, around cities of 50,000 or more; and (c) unincorporated places of 2,500 inhabitants or more outside any urban fringe. The remaining population is classified as rural. According to the urban definition used in previous censuses, the urban population comprises all persons living in incorporated places of 2,500 inhabitants or more and areas (usually minor civil divisions) classified as urban under special rules relating to population size and density.

In both definitions, the most important component of the urban territory is the group of incorporated places having 2,500 inhabitants or more. A definition of urban territory restricted to such places, however, would exclude a number of equally large and densely settled places, merely because they were not incorporated places. Under the old definition, an effort was made to avoid some of the more obvious omissions by the inclusion of the places urban under special rules. Even with these rules, however, many large and closely built-up places were excluded from the urban territory. To improve the situation in the 1950 Census, the Bureau of the Census set up, in advance of enumeration, boundaries for urban-fringe areas around cities of 50,000 or more and for unincorporated places outside urban fringes. All the population residing in urban-fringe areas and in unincorporated places of 2,500 or more is classified as urban according to the 1950 definition. (Of course,

<sup>1</sup> Except in New England, New York, and Wisconsin, where "towns" are minor civil divisions of counties and are not necessarily densely settled centers like the towns in other States.

the incorporated places of 2,500 or more are urban in their own right.) Consequently, the special rules of the old definition are no longer necessary.

According to the new urban definition, the 1950 urban population of Florida consisted of the following components: (1) The 1,566,788 inhabitants of the 94 incorporated places of 2,500 inhabitants or more; (2) the 41,753 inhabitants of the 4 specially delineated unincorporated places of 2,500 inhabitants or more; and (3) 205,349 persons living in other territory included in the urban-fringe areas of the Jacksonville, Miami, Orlando, St. Petersburg, and Tampa Urbanized Areas. Since there were no places classified as urban under special rule in Florida according to the old definition, the first element comprised the urban population under the old definition. The population of the remaining elements—247,102—represents the gain in the urban population of Florida which resulted from the change in definition.

Although the Bureau of the Census has employed other definitions in the course of its history, the statistics on the population by urban and rural residence for the years 1830 to 1940 are shown in accordance with the 1940 definition. The 1950 statistics are shown in accordance with both the new and old definitions.

**Trends in urban and rural population.**—Trends in the urban and rural population can be examined only on the basis of the old definition. On this basis, the 1950 urban population of 1,566,788 was almost 15 times as large as the 1900 urban population of 107,031 (table 1). The numerical increase of 520,997 between 1940 and 1950 was the largest in the history of the State and represented a gain of 49.8 percent over the 1940 urban population of 1,045,791. All 28 of the incorporated places of 10,000 inhabitants or more in the State shared in the growth of the urban population between 1940 and 1950. The increases ranged from 12.1 percent for St. Augustine city to 44.0 percent for North Miami town (table 4). In 1900 the one city of 25,000 inhabitants or more in Florida accounted for 5.4 percent of the population of the State; by 1950 the 15 cities of this size accounted for 38.4 percent of the population of the State (table 3). The proportion of the population of the State living in urban territory rose from 20.3 percent in 1900 to 56.5 percent in 1950.

The rural population of Florida increased from 421,511 in 1900 to 1,204,517 in 1950 (table 1). The numerical increase in the rural population of 352,894 between 1940 and 1950 was the largest in the history of the State and represented an increase of 41.4 percent over the 1940 rural population of 851,623. In each intercensal period between 1900 and 1950 the rate of growth of the rural population was below that of the urban population. As a result, the proportion of the population living in rural territory declined from 79.7 to 43.5 percent over the 50-year period.

**Counties.**—The counties in Florida ranged in size from Glades with a population of 2,199 to Dade with a population of 495,084 (table 5). Between 1940 and 1950, 49 of the 67 counties increased in population as compared with 53 in the previous decade. The population of 5 counties—Bay, Broward, Clay, Monroe, and Okaloosa—more than doubled between 1940 and 1950. The largest numerical increase was recorded for Dade County, which had a gain of 227,345. As in the previous 10-year period, the increase for Dade County accounted for more than one-fourth of the population gain for the entire State. Three counties—Duval, Hillsborough, and Pinellas—accounted for another fourth of the gain. These three counties had accounted for one-fourth of the population gain of the State in the decade 1930 to 1940 also.

**Minor civil divisions.**—To the primary political divisions into which counties are divided, the Bureau of the Census applies the general term "minor civil divisions." The minor civil divisions shown for Florida in previous censuses were election precincts. The boundaries of election precincts, however, are subject to frequent changes. In the 1950 Census, therefore, the election precincts were replaced by another political division of the counties,

the commissioner's districts, the boundaries of which are less subject to change. The incorporated cities, towns, and villages form subdivisions of the minor civil divisions in which they are located.

Table 6 shows statistics on the population of each county by minor civil divisions. The population of each incorporated and unincorporated place is shown in *italics* under the population of the minor civil division in which it is located. When an incorporated or unincorporated place lies in two or more minor civil divisions, the population of the several parts is shown in table 6 in the appropriate minor civil divisions, and each part is designated by "part." Figures on the total population of such places are given in table 7. Unincorporated places are designated by "uninc." Changes between the 1940 Census and the 1950 Census in the boundaries of the incorporated places listed are shown in notes to table 6. For changes in boundaries prior to the 1940 Census, see reports of the Sixteenth Census (1940), *Population*, Vol. I, pp. 214–224, and reports of earlier censuses.

**Incorporated and unincorporated places.**—There were 305 places in Florida in 1950 incorporated as cities, towns, or villages and 30 unincorporated places of 1,000 inhabitants or more. There were 1,734,340 persons living in the incorporated places, 167,552 of whom were in the 211 places of fewer than 2,500 inhabitants. Of the 80,367 persons living in the unincorporated places, 38,614 were in the 26 places of 1,000 to 2,500 inhabitants. The incorporated places ranged in size from two which had no population reported in 1950 to Miami city with a population of 249,276.

Political units recognized as incorporated places in the 1950 Census are those which are incorporated as cities, boroughs, towns, and villages with the exception that towns are not recognized as incorporated places in the New England States, New York, and Wisconsin.

The Bureau of the Census has delineated boundaries for the thickly settled urban fringe around cities of 50,000 or more and has also delineated boundaries for unincorporated places of 1,000 or more which are densely settled population centers without corporate limits. Although there are unincorporated places within the urban fringe, it was not feasible to establish boundaries for such places and therefore they are not identified as separate places.

The count of urban places in the 1950 Census comprises all incorporated places of 2,500 or more regardless of location and unincorporated places of 2,500 or more which are located outside the urban-fringe areas. Incorporated places of less than 2,500 which lie in the urban fringe are not recognized as urban places.

**Urbanized areas.**—There were five urbanized areas in Florida—the Jacksonville, Miami, Orlando, St. Petersburg, and Tampa Urbanized Areas. Of the 1,068,650 persons living in these five areas, 727,579 were in the central cities and 341,071 were in the urban-fringe areas. The urban-fringe areas had 150,692 persons in 29 incorporated places and 190,379 in the unincorporated parts (tables 2 and 9).

Each urbanized area contains at least one city with 50,000 inhabitants or more in 1940 or according to a special census taken since 1940, and some urbanized areas contain two or more cities of 50,000. Each urbanized area also includes the surrounding closely settled incorporated places and unincorporated areas that meet the criteria listed in the section below on "Urban fringe." Thus, the territory of an urbanized area may be classified into incorporated parts and unincorporated parts. (See urbanized area maps.)

An urbanized area also may be divided into central city or cities and urban fringe as defined below.

**Central cities.**—Although an urbanized area may contain more than one city of 50,000 or more, not all cities of this size are necessarily central cities. The largest city of an area is always a central city. In addition, the second and third most populous cities in the area may qualify as central cities provided they have a population of at least one-third of that of the largest city in the

area and a minimum of 25,000 inhabitants. The names of the individual urbanized areas indicate the central cities of the areas.

**Urban fringe.**—The urban fringe includes that part of the urbanized area which is outside the central city or cities. The following types of areas are embraced if they are contiguous to the central city or cities or if they are contiguous to any area already included in the urban fringe:

1. Incorporated places with 2,500 inhabitants or more in 1940 or at a subsequent special census conducted prior to 1950.

2. Incorporated places with fewer than 2,500 inhabitants containing an area with a concentration of 100 dwelling units or more with a density in this concentration of 500 units or more per square mile. This density represents approximately 2,000 persons per

square mile and normally is the minimum found associated with a closely spaced street pattern.

3. Unincorporated territory with at least 500 dwelling units per square mile.

4. Territory devoted to commercial, industrial, transportation, recreational, and other purposes functionally related to the central city.

Also included are outlying noncontiguous areas with the required dwelling unit density located within  $1\frac{1}{2}$  miles of the main contiguous urbanized part, measured along the shortest connecting highway, and other outlying areas within one-half mile of such noncontiguous areas which meet the minimum residential density rule.

5. *Staphylococcus aureus*

Map of Florida showing county boundaries, major cities, and a scale bar. The map is oriented with the Atlantic Ocean to the right. Major cities like Miami, Orlando, and Tampa are marked. A scale bar indicates distances up to 100 miles. A legend explains the symbols used for incorporated and unincorporated places.

Legend:

- CIRCLES INDICATE INCORPORATED AND UNINCORPORATED PLACES HAVING LESS THAN 250 INHABITANTS
- UNINCORPORATED PLACE NAMES ARE SHOWN IN ITALICS

Large-scale copies of this map may be purchased from Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C.

<sup>1</sup> According to the new urban definition, the urban population comprises persons residing in urban territory but not necessarily in an urban place, which is defined as an incorporated place of 2,500 or more, or an unincorporated place of 2,500 or more located outside an urbanized area. Under the old definition, incorporated places of 2,500 or more and places urban under special rule are classified as urban places. There were no places urban under special rule in Florida.

\* Includes 206,349 persons in urban territory outside of urban places.

Table 6.—POPULATION OF COUNTIES BY MINOR CIVIL DIVISIONS: 1930 TO 1950

"Uninc." designates an unincorporated place. "Districts" shown here are commissioner's districts. State returned by election precincts in 1940; comparative figures shown wherever possible. Figures for 1930 and 1940 not available for unincorporated places or places incorporated since April 1, 1940. Changes in the boundaries of incorporated places between 1940 and 1950 are given in footnotes; for boundary changes between 1930 and 1940, see reports of the 16th Census (1940), *Population*, Vol. 1, pp. 214-224. Total population of a place located within 2 or more minor civil divisions appears in table 7.]

## URBANIZED AREA MAPS

The five urbanized areas located in Florida, for which statistics are shown in table 9, are depicted in the following maps. The shaded areas, in combination, comprise the urbanized areas. To assist in locating the exact external boundaries of the areas, each

boundary feature (street segment, political boundary, or other) has been assigned a number. The boundary segments thus numbered are shown on the map and the features to which they apply are presented in the following key.
